BUILDING A NEW HOUSE OR COMMERCIAL BUILDING?

To be applicable for a new water meter connection, it is required to have a niche* at the border of the property.**

*: A 'niche' is a concrete enclosure that is open in the front and on the top and closed on both sides. It can be part of the fence of the property or it can stand alone.

** : Only valid if you are building (or have built) a new house or commercial building.

1) Specifications

The niche must be built in accordance to WEB Aruba's specifications. The size of the niche depends on the amount of water meters to be located in the niche.

Scan this QR code for the map with required niche specifications.

2) Procedure

The niche must be built **before** requesting a new water connection. **Before you start building the niche, send a map with the location of the property (situatietekening) to nis@webaruba.com.** Once received, WEB will indicate on this map where the niche must be built and will return it to you by e-mail, signed and stamped for approval.

3) When the niche is ready

A request for a new water meter connection can only be made when the niche has been built. When requesting the connection, include the signed map with the location of the niche. Also include a picture of the niche.

Your request will not be processed if the niche is not ready.

A niche is one of the requirements when requesting a new water meter connection. Other requirements depend on the type of water meter that you are requesting. For an overview of all requirements, please visit webaruba.com.
